<b>Special Model</b>	<b>USA-CP-40</b> For cutting mining screens. It not only has the advantages of automation and efficiency, but it also has various special features.		
<b>Precise Cutting</b>	This UASA-CP-40 ensures positioning accuracy on the X and Y axes which are driven by a ball screw. It also precisely controls the cutting stroke using mechanical stops. The special tool die is specifically designed for this machine.		
<b>Waste Removal Device</b>	The special waste removal device efficiently blows the cut waste onto the waste transport belt. With this device, the USA-CP-40 is continually cleaned out.		
<b>Waste Transport Belt and Waste Collection</b>	After removal, the waste transport belt will transport the waste to the waste receptacle.		
<b>Material Positioning Lamps</b>	Two adjustable lamps on the top of the machine project "+" marks onto the machine bed making it easy to properly position the material.		
<b>Four Program Types</b>	The customer can choose from four different cutting programs.
