<p>Special Model</p>	<p>HS-25</p> <p>This High Speed Hydraulic Cutting Machine is used to cut LCD film for high-tech industries. This machine cuts on a low cost PET belt. See our bulletin "High Speed Press – PET Belt" for more information on the applications and advantages of cutting on PET belts. Mechanical stops ensure precise cutting.</p>		
<p>PET Belt Side Guides</p>	<p>Side guides are located on both the inboard and outboard sides to ensure the PET belt runs accurately.</p>		
<p>Cut Part Separation</p>	<p>The excess laminated material is peeled away using separation rolls.</p>		
<p>Guillotine and Part Collection</p>	<p>A pinch roller is located before the guillotine. This pinch roller controls the precise feeding distance to the guillotine. A stacking table is used to collect the cut parts.</p>
