

Plastic Card In-Line Cutting, Counting, Stacking and Wrapping System for Web Material

Range of Application

Automatic cutting of plastic, paper and teslin cards from sheets with printed material. It is available for any commercial format.

Model **CAR-5AS**

Advantages

- The same advantages for the CAR-5AR are applicable for the CAR-5AS.
- This machine allows you to use printed sheet material.
- Combination of high volume production, accurate die cutting, and high quality card edges
- Capacity of 24,000 cards per hour using a 5-row cutting format
- Male and female shear-type die ensures excellent cut edges, special tooling for paper
- Optical sensors with a registration mark tracking system ensures a cut-to-print accuracy of +/- 0.1mm
- Cards are automatically collected and stacked
- Touch screen monitor
- Adjustable temperature air condition type oil cooler
- Servo motor position system for collection device
- One side cut cards automatic stacking unit with two interchangeable magazines under the male and female die. Magazine height is 100 mm
- Paper binding device for paper and plastic, 30 mm wide x 200 meter long x 1 roll

Optional

- Sheet Cleaner
